Response to Amendment

1. Applicant's amendment received January 13th, 2005, in which claims 1 and 12 were amended, has been fully considered and entered, but the arguments are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 9 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Home et al. (US Patent no. 5515377).

Regarding claims 1, 9 and 12, Home discloses a base-layer components that are configured to decode a base-layer input stream, and to produce therefrom a base-layer output stream (See fig. 1, item 80), enhancement-layer components that are configured to decode an enhancement-layer input stream, and to produce therefrom information that supplements the base-layer output stream to provide an enhanced output stream (See fig. 1, item 85), and a controller, operably coupled to the enhancement layer components, that is configured to control the decoding of the enhancement-layer input

stream, based on a defined subset of the base-layer output stream (See col. 8, lines 63-67 and col. 9, lines 1-11).

It is noted that Horne is silent about a user defined interface with a subset of the base-layer output stream as specified in the claims.

However, Li discloses an enhancement method, device and system including enhancement layer input stream corresponding to a user selection, pattern recognition, color recognition (See Li col. 1, lines 25-28, lines 51-54, and col. 3, lines 28-33).

Therefore, it is considered obvious that one skilled in the art at the time of the invention would recognize the advantage of modifying Horne by incorporating Li's teachings in order to provide layer input stream corresponding to a user selection, pattern recognition, color recognition. The motivation for performing such a modification in Horne is to an efficient scalable method with increased resolution as taught by Li (See Li col. 3, lines 1-3).

4. Claims 2-8, and 13-20 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Claim 10 is allowed.

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

Art Unit: 2613

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
